PROJECT REPORT

JUTE SKILL DEVELOPMENT & LIVELIHOOD PROJECT

Training | Empowerment | Sustainable Livelihood

PROJECT COST: ₹5,00,00,000 (Five Crore Only)

Target Beneficiaries
1,500 Trainees
(Women & Men)

Training Duration
15 – 21 Days
(Per Batch)

Project Location
Guwahati, Assam
(At Our Institution)

Focus
Jute Craft, Value Addition and Market Linkage

Skilled Hands | Sustainable Future

1. Executive Summary

Swa. Manjulabai Shankkrao Mane Samajik Shikshanik Sanstha proposes to establish a structured jute-based vocational training and livelihood programme for economically vulnerable women and men. The programme will provide practical instruction in jute product design, cutting, stitching, weaving, finishing, quality control, packaging, pricing and market readiness. The proposed venue is the school/institution shown in the photograph supplied for this report, subject to a written venue-use arrangement and required approvals.

The programme is designed around short, intensive batches of approximately 15–21 days, followed by assessment, certification/recognition where available, enterprise orientation and market linkage. The illustrative plan targets 1,500 trainees during the initial project cycle. Actual annual intake and total project duration should be finalized after funding terms, trainer capacity and local demand are confirmed.

Project at a glance

Item	Proposed provision
Total project outlay	■5.00 crore
Primary beneficiaries	Women and men from low-income households; priority to unemployed youth, women seeking income, and other eligible disadvantaged groups
Illustrative trainee target	1,500 trainees
Training duration	15–21 days per batch, with practical assessment
Core products	Shopping bags, carry bags, pouches, folders, baskets, mats, table accessories, rope/craft products and customized institutional products
Delivery model	Classroom demonstration + supervised workshop practice + assessment + livelihood/market linkage
Funding model	Grant/donation/philanthropic funding; no bank loan assumed in this DPR

Important planning note: the project budget is a proposed allocation, not a sanction or guarantee of funding. Unit costs, beneficiary counts, certification partners and sales assumptions should be verified before submission to a funder.

2. Background and Rationale

Jute is a natural fibre used to make reusable and biodegradable products. Jute-based craft and small-scale manufacturing can create practical skill pathways for people who need accessible training and an opportunity to earn through wage work, group production or micro-enterprise. The project will emphasize usable skills and realistic market demand rather than training alone.

The proposed school/institution venue may offer classroom space for theory, demonstrations and group instruction. Dedicated workshop areas, safe storage, ventilation, suitable electrical supply, accessible sanitation and secure storage of tools and raw materials must be checked before training begins.

Project objectives

• Train eligible women and men in marketable jute craft and product-making skills.

• Provide hands-on practice using appropriate tools, machines and quality standards.

• Support trainees with product costing, basic bookkeeping, packaging, digital promotion and customer handling.

• Facilitate job referrals, producer groups, self-employment and market connections where feasible.

• Encourage reusable, lower-waste product alternatives and responsible use of materials.

• Track completion, skills assessment and livelihood outcomes after training.

3. Beneficiaries and Selection

Proposed target: 1,500 trainees across batches. Beneficiary selection should be transparent and documented through application forms, identity/eligibility checks appropriate to the funding scheme, attendance records and baseline assessments. Priority categories may include low-income households, unemployed or underemployed adults, women seeking additional income, school-leavers and other locally identified vulnerable groups.

Suggested safeguards: equal opportunity irrespective of gender; accessible training timings; clear non-discrimination policy; safe and respectful learning environment; grievance contact; consent for photographs and case studies; and no promise of guaranteed employment or earnings.

4. Training Curriculum and Delivery

Module	Key content	Suggested duration
Orientation & safety	Programme orientation, tool safety, housekeeping, material handling and attendance expectations	0.5 day
Jute material basics	Types of jute fabric/rope, selection, storage, measurement and waste reduction	1 day
Design & pattern making	Product dimensions, templates, cutting plans, colour and design choices	2 days
Cutting, stitching & assembly	Bag panels, handles, lining, seams, reinforcement and supervised machine practice	4–5 days
Weaving & craft techniques	Rope craft, baskets, mats, decorative finishes and product variation	3–4 days
Finishing & quality	Trimming, inspection, durability checks, cleaning, labelling and packaging	1–2 days
Enterprise readiness	Costing, pricing, simple records, customer service, online/offline marketing and orders	1–2 days
Assessment & showcase	Practical product assessment, feedback, portfolio and completion documentation	1 day

Illustrative visual: trainees practising jute craft in a group workshop. This generated illustration is not evidence of an actual class already conducted at the proposed venue.

5. Training Activities and Illustrative Photographs

Practical training will combine instructor demonstrations with individual and group production exercises. Each trainee should complete a set of sample products and be assessed against a simple checklist covering measurement, stitching/weaving, finish, durability, safe work practices and product presentation.

Illustrative visual: hands-on jute cutting, stitching and assembly practice. Generated for proposal illustration; replace with genuine project photographs after activities begin.

Illustrative visual: trainer-led classroom demonstration and group learning. Generated for proposal illustration; not a photograph of confirmed activities at the school.

6. Products, Equipment and Workshop Setup

Illustrative display of possible finished products: bags, baskets, mats, pouches and rope-based craft. Product selection should be finalized after local market testing and consultation with buyers.

Indicative equipment and materials

Category	Indicative items
Cutting & measurement	Cutting tables, shears, rulers, measuring tapes, templates, cutting mats and storage racks
Stitching & assembly	Appropriate sewing machines, needles, thread, bobbins, work tables, chairs and basic maintenance tools
Craft & finishing	Hand tools, weaving frames, glue/finishing supplies where suitable, trimming tools and quality-check fixtures
Safety & facilities	First-aid kits, fire-safety equipment, safe electrical fittings, ventilation, lighting and secure raw-material storage
Learning & administration	Training aids, product samples, registers, computer/printer access where needed, display boards and documentation materials

Before purchase, obtain competitive quotations and confirm whether the venue already has usable furniture, electrical infrastructure and classrooms. Assets purchased from project funds should be inventoried and used only for approved project purposes.

7. Implementation Plan

Phase	Key activities	Indicative period
1. Mobilisation & approvals	Venue permission, beneficiary outreach, local demand scan, trainer recruitment, supplier quotations and safeguarding arrangements	Month 1–2
2. Setup & curriculum finalisation	Procure essential tools/materials, prepare workshop space, confirm modules, assessments and record formats	Month 2–3
3. Training batches	Deliver 15–21 day batches, practical production, attendance and assessment	Month 3–18
4. Certification & livelihood linkage	Connect with eligible assessment/certification bodies, employers, buyers, local fairs and producer groups	Month 4–20
5. Follow-up & evaluation	Follow up with graduates, document employment/self-employment outcomes and complete utilisation reporting	Month 6–24

A 24-month implementation window is suggested for planning and should be adjusted to the funder's approval period. A batch calendar should specify number of trainees per batch, trainer-to-trainee ratio, class schedule, material quantities and assessment dates.

8. Staffing and Governance

Role	Core responsibility
Project coordinator	Overall delivery, venue coordination, funder reporting and risk management
Lead jute trainer(s)	Curriculum delivery, demonstrations, workshop safety and trainee assessment
Assistant trainers / craft mentors	Small-group practice, individual support and production quality
Mobilisation & placement/market-linkage staff	Beneficiary outreach, buyer engagement, referrals and graduate follow-up
Accounts & administration	Bookkeeping, procurement files, attendance, asset register and financial documentation

The organisation should maintain a project bank/accounting trail as required by the funder, approved budget, procurement policy, attendance and assessment records, stock/asset registers, invoices, payment proofs, progress reports and utilisation certificates. Any related-party procurement or conflict of interest should be disclosed and handled transparently.

9. Project Budget: ■5.00 Crore

Budget head	Basis / indicative scope	Amount (■ lakh)
Trainee training delivery	1,500 trainees × indicative ■15,000 per trainee for core training, practical materials and training delivery	225
Tools, machines & workshop equipment	Sewing/craft equipment, cutting tables, tools, safety equipment, storage and setup	55
Trainers & technical personnel	Lead trainers, assistant trainers, craft mentors and technical supervision not covered in per-trainee costs	60
Assessment, certification & job/enterprise linkage	Assessment fees where applicable, documentation, eligible certifications, employer/buyer linkage and follow-up	45
Starter toolkits & enterprise support	Selected graduates' basic toolkits, sample development and group-enterprise starter support under clear criteria	35
Mobilisation & beneficiary support	Community outreach, registration, counselling, accessibility and local coordination	25
Venue, utilities & maintenance	Workshop/classroom use, utilities, upkeep and necessary minor fit-out, subject to venue agreement	20
Monitoring, administration & audit	Project management support, MIS, documentation, financial review and audit-related costs	25
Contingency	Controlled provision for price variation and unforeseen eligible project needs, with approval	10
TOTAL		**500**

Total proposed budget: ■500 lakh = ■5,00,00,000 = ■5 crore.

Budget assumptions: the ■15,000 per-trainee planning figure is an indicative combined allowance for core training and associated practical delivery. Assessment/certification, toolkit and other support heads are separately budgeted only for activities not already included in that allowance. Prevent double-counting by matching each cost to invoices and the final approved budget. The earlier working assumption of up to ■10,000 for training and roughly ■5,000–■7,000 for related certification/registration/job-linkage costs should be validated against actual providers and the chosen scheme.

10. Monitoring, Evaluation and Reporting

Indicator	Evidence / method
Beneficiaries enrolled	Registration records with appropriate eligibility documentation and consent
Attendance & completion	Daily attendance, batch-wise completion register and reasons for drop-out
Skill improvement	Baseline and endline practical checklist; samples of trainee-made products
Certification / assessment	Assessment results and certificates only where issued by an eligible body
Livelihood outcomes	Follow-up at 3 and 6 months: employment, paid orders, self-employment or producer-group activity
Financial accountability	Ledger, vouchers, invoices, bank proofs, procurement comparisons, asset register and utilisation reporting

Proposed performance targets (to be finalised with funder): enrol 1,500 trainees; target at least 80% completion; assess all completers; and conduct livelihood follow-up for at least 70% of completers. These are proposed targets, not guaranteed results. Report actual outcomes transparently, including challenges and drop-outs.

11. Sustainability and Market Linkage

• Use market testing to select designs, sizes and price points before scaling production.

• Develop sample catalogues and a basic product costing sheet for each product.

• Seek purchase conversations with local retailers, gift suppliers, institutions, event organisers and responsible corporate buyers.

• Explore producer groups or self-help group linkages where appropriate, without requiring trainees to take debt.

• Support product photography, packaging, order tracking and basic digital marketing.

• Avoid promising guaranteed sales; document buyer interest, actual orders, payments and repeat purchases.

12. Risks and Mitigation

Risk	Mitigation
Venue or permission delays	Obtain written permission/MoU, verify room capacity and confirm operating schedule before committing expenditure
Low attendance / drop-out	Community mobilisation, suitable timings, clear expectations and early follow-up
Products do not find buyers	Conduct demand checks, make prototypes, gather buyer feedback and adjust designs before bulk production
Equipment underuse or damage	Train users, keep maintenance logs, designate asset custodians and maintain inventory
Certification uncertainty	Verify the eligibility and fees of any assessment/certification body before advertising certificates
Cost escalation / misuse	Use quotations, approved procurement limits, dual review of payments, reconciliations and periodic reporting

13. Funding Request and Approval Conditions

The organisation seeks philanthropic, donor and eligible institutional funding of up to ■5 crore for the activities and budget heads described in this DPR. Funds should be released against an agreed implementation plan and reporting schedule. No bank borrowing is assumed in this proposal. The funder may approve the full amount, approve a phased amount or require budget revisions.

Documents to attach before submission

• Trust registration certificate, trust deed and PAN.

• Applicable 12A/12AB and 80G documents, if held and relevant to the proposed funding.

• Trustee resolution authorising the project and funding application.

• Venue-use permission/MoU from the school/institution and proof of authorised signatory.

• Detailed batch plan, trainer profiles, beneficiary selection policy and safeguarding policy.

• Supplier quotations, equipment list, staffing plan and final item-wise budget.

• Bank details, audited financial statements and any funder-specific compliance forms.

14. Conclusion

This proposal presents a practical, skills-led pathway to help women and men build jute product-making capability and explore wage work, group production or self-employment. With suitable venue permission, competent trainers, market-informed products and transparent financial controls, the project can provide structured training and trackable livelihood support. Final approval should follow verification of organisational documents, venue readiness, costs and funding conditions.
